EDUCATION

University of Texas at Dallas

Bachelor of Science in Software Engineering

Familiar with: Cursor, Python, C++, Java, React, React Native, JavaScript

Richardson, TX

Expected May 2027

EXPERIENCE

RF Platform Intern

Nokia Inc.

June 2026 – Present

Coppell, TX

- Developed **automated test scripts** that reduced **manual test-encoding** effort by **60%**, replacing repetitive hand-authored steps with repeatable checks and tightening RF platform validation cycles.
- Built a **documentation pipeline** for a **legacy codebase**—templates, structured onboarding notes, and living references—so engineers could ramp faster, trace behavior, and change unfamiliar modules with less guesswork.
- Delivered work within an **Agile** cadence (sprint planning, standups, backlog grooming), partnering with cross-functional teammates to prioritize platform fixes, surface blockers early, and ship incremental improvements each sprint.

Frontend Developer

Association for Computing Machinery (ACM)

Sep. 2025 – Nov. 2025

Richardson, TX

- Built and designed **end-to-end frontend** for an AI-powered voice cooking assistant using **React Native**, crafting all **UI/UX layouts, page designs, and navigation routes** for seamless cross-platform mobile experience.
- Implemented **RESTful API integration** connecting frontend to backend recipe database and AI agent, handling data fetching, user authentication flows, and personalized response rendering across **100+ recipe entries**.
- Collaborated within a **cross-functional Agile team** of 6 developers, owning all frontend deliverables from wireframe to deployment and communicating design decisions to non-technical stakeholders in weekly releases.

Engineering Project Lead

UTDesign EPICS Program

Jan. 2025 – May 2025

Richardson, TX

- Led team of 5 engineers in designing and prototyping cost-effective vacuum former, collaborating cross-functionally to define requirements and reduce production costs by 40% through iterative problem-solving and data-driven decision making.
- Coordinated with industry sponsors to validate technical specifications and communicate complex engineering concepts to non-technical stakeholders, ensuring alignment with real-world manufacturing constraints.
- Mentored team members in CAD design and testing methodologies, taking ownership of project outcomes and delivering exceptional results recognized with **Excellence in Design award** among 20+ competing projects.

PROJECTS

Sensora – Biometric Focus Tracking Dashboard | *React, Flask, Python, OpenAI CLIP*

Mar. 2026

- Built full-stack **real-time focus tracking dashboard** integrating a **camera-based facial analysis pipeline** (OpenAI CLIP) with a React frontend, visualizing biometric engagement scores across live and historical sessions.
- Engineered **WebSocket integration** for live focus score streaming and a **REST API** consumed by a custom SVG line chart component, normalizing raw sensor data (unix timestamps, 0–1 scores) into display-ready formats.
- Designed responsive UI with **processing pipeline visualization** (Camera → CLIP → Microcontroller), interactive tooltips, and animated charts — recognized with **Best Beginner Project** at **HackAI** among all first-time hackathon teams.

Simmer – AI-Powered Voice Cooking Assistant | *Python, React Native, FastAPI*

Sep. 2025 – Nov. 2025

- Built full-stack **conversational AI agent** with multi-modal capabilities (chat and voice) using **Whisper STT** and text-to-speech, processing 200+ recipe steps and enabling hands-free interaction for real customer use cases.
- Integrated **OpenAI LLM** with custom prompt engineering for real-time Q&A functionality, analyzing customer intent to provide contextual cooking assistance and troubleshooting, directly impacting user experience.
- Designed **API integration framework** connecting AI agent to recipe database and user authentication system, implementing OAuth 2.0 and processing large datasets to deliver personalized recommendations.
